

5                   METHOD, SYSTEM, AND ARTICLE OF MANUFACTURE  
                    FOR DATA REPLICATION

ABSTRACT

                    Provided are a method, system and article of manufacture for switching. An  
10   indication is received of a failure of a primary storage subsystem at a switch, wherein the  
                    switch couples a host to the primary storage subsystem and a secondary storage  
                    subsystem. Subsequently, a command received from the host at the switch is directed to  
                    the secondary storage subsystem for completion.
